Abstract. This paper provides an overview of the recently started Prosperity4All project. Prosperity4all aims at a paradigm shift in eInclusion. It focuses on developing the infrastructure to allow a new ecosystem to grow; one that is based on self-rewarding collaboration, that can reduce redundant development, lower costs, increase market reach and penetration internationally, and create the robust cross-platform spectrum of mainstream and assistive technology based access solutions required. This will be done through a process based on true value propositions for all stakeholders and resulting in a system that can profitably serve markets as small as one, at a personally and societally affordable cost.

Keywords: Accessibility, ecosystem
